

Energy

Purpose

To establish the principles which make it possible to ensure supply of the different forms of energy required by the company in an environmentally and economically sustainable way, with continuous and sustainable improvements in its environmental performance achieved through innovation and efficient management and use of energy.

Principles

- We work to develop and implement an Energy Management System that is transparent, auditable and based on Chilean and international norms and that covers our installations' different energy sources and their possible use.
- We develop and implement programmes to identify, evaluate and control the availability and efficient use of energy resources in the different areas of the company.
- We design, build and operate our installations in such a way as to comply with all laws, norms and regulation in force that apply to the use and transformation of energy resources and, in their absence, seek and apply best administration and engineering practices in order to ensure their responsible use.
- We foster best practices in energy efficiency in order to comply with the goals of sustainable growth established by the company.

Energy

- We incorporate our suppliers and contractors into the implementation of this policy, promoting their alignment with it through their application of the respective sustainable development and energy efficiency programmes.
- We encourage the training of all our personnel in the use and management of energy resources.
- We communicate openly with employees and the community about the results and progress achieved in programmes related to energy efficiency.
- We promote measurement and reduction of emissions of greenhouse gases as a result of the use of energy resources in our operations and by our contractors and suppliers.
- We contribute at a regional or national level, depending on the case, to development and awareness of policies, laws, regulation, norms, practices and techniques that promote energy efficiency and the development of new primary sources that are consistent with this policy.
- We permanently follow the development of Alternative Renewable Energies (AREs) and other technologies related to energy efficiency and foster their potential application in our operations, either directly or through our suppliers or contractors.
